

The piano action is a series of components that work together to transfer the movement of your finger from the piano key to the piano string resulting in the production of a sound. It is perhaps the most critical part of the piano and most certainly the most complex.

Petof has been building world-class pianos and piano actions for over 140 years, and they continue to hold their position as the largest piano manufacturer in Europe. The quality of the materials and the skill of their craftsmen remains at the highest level and is never compromised.

The Petrof Piano Company houses an elaborate Research and Development department which provides extensive data analysis of sound and tone elements from the Petrof pianos and their individual components.

So if you want an instrument that combines European tradition with the latest technological advancements and provides you with the best value for your investment, then you need look no further than Petrof.

Whether you want your piano to have a traditional feel and touch or a lighter, more responsive feel and touch, Petrof gives you the freedom to select the right piano action for yourself. The Petrof Model III, Model IV and Model V offer two distinct options in their actions.

The **Petrof Original Action** is based on traditional design principles that have been integrated with Petrof's state-of-the-art technology. In uniting their unrivaled Research and Development department with accomplished piano virtuosos worldwide, Petrof was able to fine tune their Petrof Original Action into the most accurate and dynamic piano action in the industry.

- Traditional feel
- Precision balance
- Fast repetition
- Key stability
- Sensitive response
- Accurate striking
- Consistent touch

Traditional weighting methods are used to give the Petrof Original Action its smooth touch

The **Petrof Sterling Original Action** incorporates the same design theories that are used in the Petrof Original Action, with a lighter touch and quicker response. The traditional lead counterweights have been eliminated from the keys and have been replaced with strategically placed magnets within the action assembly reducing mass and inertia. It is also important to note that pianos featuring the Petrof Sterling Original Action can be tuned and regulated by your piano technician just like any other piano.

- Lighter feel
- Precision balance
- Quickest repetition
- Key stability
- Lower mass
- Reduced inertia
- Sensitive response
- Accurate striking
- Consistent touch
- Reduced friction
- Lead-free

The removal of lead-weights in the keys and the addition of magnets provide the Petrof Sterling Action with its accelerated response and feel.
